Patent No. 6588746

GENERAL INFORMATION:

APPLICANT: LIU, QIANO

TITLE OF INVENTION: POSITION DEPENDENT RECOGNITION OF GNN NUCLEOTIDE

TITLE OF INVENTION: POSITION DEPENDENT RECOGNITION OF GNN NUCLEOTIDE

TITLE OF INVENTION: POSITION DEPENDENT RECOGNITION OF GNN NUCLEOTIDE

TITLE OF INVENTION: PASS-0011.20 / S11-US2

CURRENT APPLICATION DATE: 2002-03-25

NUMBER OF SEQ ID NOS: 4085

SOFTWARE: PATENTIN Ver. 2.0

                                                                                                                                                                                                                                                                                                                       ; TYPE: DNA
; ORGANISM: Artificial
; FEATURE:
; OTHER INFORMATION: MAP 19 Primer - Primer used in RAPD analysis comparing Jal Pallav
; OTHER INFORMATION: with Jorlab-2, Manjusha, Mandakini, Bio-13, and Ceylon.
US-09-263-790-19
                                         Sequence 19, Application US/09263790
Patent No. PP12997
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Nitral Kumar PALLAVI, WATER LOGGING TOLERANT CYMBOPOGON WINTERIANUS
TITLE OF INVENTION: JAL PALLAVI, WATER LOGGING TOLERANT CYMBOPOGON WINTERIANUS
TITLE OF INVENTION: JAL PALLAVI, WATER LOGGING TOLERANT CYMBOPOGON WINTERIANUS
CURRENT APPLICATION NUMBER: US/09/263,790
CURRENT FILING DATE: 1999-03-05
NUMBER OF SEQ ID NOS: 38
SOFTWARE: Patentin version 3.0
SEQ ID NO 19
LENGTH: 10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

Sequence 13, Application US/09537186
Batent No. 6534696
GENERAL INFORMATION:
APPLICAMT: COUNCIL OF SCIENTIFIC AND INDUSTRIAL RESEARCH
TITLE OF INVENTION: A disease resistant high yielding variety Papaver somniferum cal
TITLE OF INVENTION: Rakshit
FILE REPRENEURS: OSB615
CURRENT APPLICATION NUMBER: US/09/537,186
CURRENT FILING DATE: 2000-03-29
NUMBER OF SEQ ID NOS: 14
SCOTWARE: Patentin version 3.1
LENGTH: 10
TYPE: DNA
ORGANISM: Artificial Sequence

US-09-425-798-12

Sequence 12. Application US/09425798A

Patent No. 6423433

Patent No. 6423433

GENERAL INFORMATION:
APPLICANT: Gorenteein Dr., David G.
APPLICANT: King Dr., David J.
APPLICANT: Wentura, Daniel A.
APPLICANT: Brasier Dr., Allan R.
APPLICANT: Brasier Dr., Allan R.
APPLICANT: On On On One of Phosphothionate
ITILE OF INVENTION: Oligonuclectide Aptamers
FILE REPERENCE: 122144-1005

CURRENT APPLICATION NUMBER: US/09/425,798A

CURRENT FILING DATE: 1999-10-25

PRIOR FILING DATE: 1999-10-26

NUMBER OF SEQ ID NOS: 15

SEQ ID NO 12

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ) OTHER INFORMATION: Description of Artificial Sequence: example target , OTHER INFORMATION: DNA US-09-989-789-2454
                                                                                                                                                                                                                                                                                                                                                                                               Sequence 2454. Application US/09989789

Patent No. 6588746

GENERAL INFORMATION:
APPLICANT: LIU, Qiang

TITLE OF INVENTION: POSITION DEPENDENT RECOGNITION OF GNN NUCLEOTIDE
TITLE OF INVENTION: POSITION DEPENDENT RECOGNITION OF GNN NUCLEOTIDE
TITLE OF INVENTION: TRIPLETS BY ZINC FINGERS
FILE REFERRANCE: 8325-0011.20 / S11-US2
CURRENT APPLICATION NUMBER: US/09/989,789
CURRENT FILING DATE: 2002-03-25
NUMBER OF SEQ ID NOS: 4085
SSOTIMARE: PREFENTIN VET. 2.0
SSO ID NO 2454
LENGTH: 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ő
                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0, Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            21.4%; Score 6; DB 1; Length 9; 100.0%; Pred. GENERAL INFORMATION:

APPLICANT: Kined, Etc. B.

APPLICANT: Rice, Michael C.

TITLE OF INVENTION: Targeted Chromosomal Genomic Alterations with Modified Single

TITLE OF INVENTION: Stranded Oligonucleotides

TILE REFERENCE: Napro-4

CURRENT APPLICATION NUMBER: US/09/818,975

CURRENT FILING DATE: 2001-03-27

PRIOR PILING DATE: 2000-03-27

PRIOR PILING DATE: 2000-03-27

PRIOR PILING DATE: 2000-06-01

PRIOR PILING DATE: 2000-06-01

PRIOR PILING DATE: 2000-06-01

PRIOR PILING DATE: 2000-06-01

PRIOR SPLING DATE: 2000-06-01

PRIOR PILING DATE: 2000-06-01

PRIOR SPLING DATE: 2000-06-01

NUMBER OF SEG ID NOS: 4385

SOFTWARE: Friedman macro Napro4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1045, Application US/09745237A

Publication No. US20030143708A1

GENERAL INFORMATION:
APPLICANT: Ribozyme Pharmaceuticals, Inc.
APPLICANT: Blatt, Larry
APPLICANT: Blatt, Larry
APPLICANT: Blatt, Larry
APPLICANT: WcSwiggen, Jim
TITLE OF INVENTION: Method and Reagent for the Treatment of Alzheimer's Disease
TIER PERRENCE: 400/007 (MBHBN0-918-A)
CURRENT APPLICATION NUMBER: 2002-04-15
NUMBER OF SEQ ID NOS: 4550
SOFTWARE: PatentIn version 3.0
SEQ ID NO 1045
LENGTH: 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 643, Application US/09745237A
